

DataPedal

Accelerate Your Workflow
with Intelligent Document
Extraction and Loading

What is DataPedal?

With DataPedal, you can easily forward your documents or files, such as invoices, to a dedicated mailbox* for extraction. Once received, we put the pedal to the metal, extracting the data you need and automatically uploading it into your business system – such as an ERP, CRM, Finance or HR system.

DataPedal keeps your data clean and accurate, with a **minimum 95% accuracy rate**.

*Other delivery methods are available upon request

How does DataPedal work?

DataPedal uses a combination of software logic, AI technology and 'human in the loop' oversight to deliver an efficient and accurate service.

There's a quick onboarding process for each document type, so that we can verify that the right data is being extracted, and that it's being loaded correctly into your business system.

Once set up, simply email your documents to your dedicated mailbox and we'll handle the rest—ensuring data accuracy before it's automatically uploaded to your target system.

What are the Key Advantages?

- Cost-efficiencies
- Free your staff more valuable work
- The integration work is done for you

Who is it for?

**Sustainability
Reporting (ESG)**

Finance

Government

Customer Success: Restaurant Brands

Talk to us and see how we helped Restaurant Brands capture and automate their document processing capabilities using AI. Allowing them to focus on delivering an improved customer experience across their franchise brands: KFC, Pizza Hutt, Carls Jr & Taco Bell.
